RELATED-US-APPL-DATA:

Application is a non-provisional-of-provisional application 60/178753, filed January 28, 2000,

[0001] This application claims the benefit of U.S. provisional application Ser. No. 60/178,753, filed Jan. 28, 2000.

CROSS REFERENCE TO RELATED APPLICATIONS

[0002] Related subject matter is disclosed in co-pending U.S. patent application of Nils B. Lahr et al., filed Sep. 28, 1998, entitled "Streaming Media Transparency" (attorney's file IBC-P001); in co-pending U.S. patent application of Nils B. Lahr, filed even date herewith, entitled "Method and Apparatus for Encoder-Based Distribution of Live Video and Other Streaming Content" (attorney's file 39512A); in co-pending U.S. patent application of Nils B. Lahr, filed even date herewith, entitled "A System and Method for Rewriting Media Resource Request and/or Response Between Origin Server and Client" (attorney's file 39511A); in co-pending U.S. patent application of Nils B. Lahr, filed even date herewith, entitled "Method and Apparatus for Client-Side Authentication and Stream Selection in a Content Distribution System" (attorney's file 39505A); in co-pending U.S. patent application of Nils B. Lahr, filed even date herewith, entitled "Method and Apparatus for Using Single Uniform Resource Locator for Resources With Multiple Formats" (attorney's file 39502A); in co-pending U.S. patent application of Nils B. Lahr et al., filed even date herewith, entitled "A System and Method for Mirroring and Caching Compressed Data in a Content Distribution System" (attorney's file 39565A); in

co-pending U.S. patent application of Nils B. Lahr, filed even date herewith, entitled "A System and Method for Determining Optimal Server in a Distributed Network for Serving Content Streams" (attorney's file 39551A); and in co-pending U.S. patent application of Nils B. Lahr, filed even date herewith, entitled "A System and Method for Performing Broadcast-Enabled Disk Drive Replication in a Distributed Data Delivery Network" (attorney's file 39564A); the entire contents of each of these applications being expressly incorporated herein by reference.

Application 09/839524 is a continuation-in-part of US application 09/680063, filed October 4, 2000, PENDING

Application is a non-provisional-of-provisional application 60/199046, filed April 21, 2000,

Application is a non-provisional-of-provisional application 60/157826, filed October 5, 1999,

CROSS-REFERENCE TO RELATED APPLICATIONS

[0001] This application claims the benefit of the filing date of U.S. Provisional Application No. 60/199,046, entitled "Software Development Tool," filed on Apr. 21, 2000, and is a continuation-in-part of U.S. patent application Ser. No. 09/680,063, entitled "Method and System for Developing Software," filed on Oct. 4, 2000, which claims the benefit of the filing date of U.S. Provisional Application No. 60/157,826, entitled "Visual Unified Modeling Language Development Tool," filed on Oct. 5, 1999, and U.S. Provisional Application No. 60/199,046, entitled "Software Development Tool," filed on Apr. 21, 2000; all of which are incorporated herein by reference.

[0002] The following identified U.S. patent applications are also relied upon and are incorporated by reference in this application:

[0003] U.S. patent application Ser. No. 09/680,065, entitled "Method And System For Displaying Changes Of Source Code," filed on Oct. 4, 2000;

[0004] U.S. patent application Ser. No. 09/680,030, entitled "Method And System For Generating, Applying, And Defining A Pattern," filed on Oct. 4, 2000;

[0005] U.S. patent application Ser. No. 09/680,064, entitled "Method And System For Collapsing A Graphical Representation Of Related Elements," filed on Oct. 4, 2000;

[0006] U.S. patent application Ser. No. _____, entitled "Methods and Systems for Generating Source Code for Object Oriented Elements," bearing attorney docket no. 30013630-0008, and filed on the same date herewith;

[0007] U.S. patent application Ser. No. _____, entitled "Methods and Systems for Relating Data Structures and Object Oriented Elements for Distributed Computing," bearing attorney docket no. 30013630-0009, and filed on the same date herewith;

[0008] U.S. patent application Ser. No. _____, entitled "Methods and Systems for Finding Specific Line Of Source Code," bearing attorney docket no. 30013630-0011, and filed on the same date herewith;

[0009] U.S. patent application Ser. No. _____, entitled "Methods and Systems for Finding and Displaying Linked Objects," bearing attorney docket no. 30013630-0012, and filed on the same date herewith;

[0010] U.S. patent application Ser. No. _____, entitled "Methods and Systems for Animating the Interaction of Objects in an Object Oriented Program," bearing attorney docket no. 30013630-0013, and filed on the same date herewith;

[0011] U.S. patent application Ser. No. _____, entitled "Methods and Systems for Supporting and Deploying Distributed Computing Components," bearing attorney docket no. 30013630-0014, and filed on the same date herewith;

[0012] U.S. patent application Ser. No. _____, entitled "Diagrammatic Control of a Software in a Version Control System," bearing attorney docket no. 30013630-0015, and filed on the same date herewith;

[0013] U.S. patent application Ser. No. _____, entitled "Navigation Links in Generated Documentation," bearing attorney docket no. 30013630-0016, and filed on the same date herewith; and

[0014] U.S. patent application Ser. No. _____, entitled "Methods and Systems for Identifying Dependencies Between Object-Oriented Elements," bearing attorney docket no. 30013630-0019, and filed on the same date herewith.

CROSS REFERENCE TO RELATED APPLICATIONS

[0001] This application claims benefit of U.S. provisional patent applications Ser. No. 60/240,631, filed Oct. 16, 2000, and Ser. No. 60/237,297, filed Oct. 2, 2000 which are herein incorporated by reference. This application contains subject matter that is related to the subject matter described in U.S. patent application Ser. No. _____, _____, and _____, (Attorney dockets 4745FET/MDR, 4747FET/MDR, and 4748FET/MDR), filed simultaneously herewith, which are each incorporated herein by reference in their entireties.

RELATED APPLICATIONS

[0001] This application is a continuation-in-part of U.S. patent application Ser. No. 08/927,005, filed Sep. 10, 1997, entitled "WEB INTERFACE TO A PROGRAMMABLE CONTROLLER," now U.S. Pat. No. 6,282,454, issued Aug. 28, 2001 (SAA-1). This application is related to the following, commonly assigned applications: "WEB INTERFACE TO A PROGRAMMABLE CONTROLLER," Ser. No. 09/738,445, filed Dec. 15, 2000 (SAA-1-2); "INTERFACE TO A PROGRAMMABLE LOGIC CONTROLLER," Ser. No. 09/223,349, filed Dec. 30, 1998 (SAA-19); "METHOD FOR PROGRAMMING A PLC USING A WEB BROWSER," Ser. No. 09/524,171, filed Mar. 13, 2000 (SAA-34); "SYSTEM FOR PROGRAMMING A FACTORY AUTOMATION DEVICE USING A WEB BROWSER," Ser. No. 09/635,278, filed Aug. 9, 2000 (SAA-34-1); "WEB INTERFACE TO AN INPUT/OUTPUT DEVICE," Ser. No. 09/595,159, filed Jun. 15, 2000 (SAA-35); "WEB INTERFACE TO AN ELECTRICAL NETWORK CONTROL SYSTEM," Ser. No. 09/738,433, filed Dec. 15, 2000 (SAA-35-1); "METHOD AND APPARATUS FOR A NOTIFICATION SYSTEM OF AN AUTOMATION NETWORK," Ser. No. 09/611,996, filed Jul. 7, 2000 (SAA-42); U.S. Pat. No. 6,061,603, "SYSTEM FOR REMOTELY ACCESSING AN INDUSTRIAL CONTROL SYSTEM OVER A COMMERCIAL COMMUNICATIONS NETWORK," issued May. 9, 2000 (SAA-1-A); and "METHOD AND SYSTEM FOR IDENTIFYING FACTORY AUTOMATION OBJECTS," Ser. No. 09/723,184, filed Nov. 27, 2000 (SAA-48). The contents of these documents are expressly incorporated herein by reference.

US-CL-CURRENT: 345/753; 709/205

APPL-NO: 09/ 840773
DATE FILED: April 23, 2001

RELATED-US-APPL-DATA:
Application is a non-provisional-of-provisional application 60/199275, filed April 24, 2000,

BACKGROUND OF THE INVENTION

[0001] This non-provisional application takes priority from U.S. Provisional Application No. 60/199,275 filed on Apr. 24, 2000.

1. FIELD OF THE INVENTION

[0002] This invention relates to the field of computer software, and more particularly to a method and apparatus for utilizing online presence information.

[0003] 2. BACKGROUND

[0004] Current network systems (such as the Internet discussed in further detail below) provide a way to transmit message data to other users connected to the network. For example, electronic mail and instant messaging client programs enable users to send and receive messages. However, such network-based systems do not provide users with a way to individually generate and control a presence indicator and then provide a mechanism for automatically opening different forms of communication interfaces when another user selects the presence indicator.

[0005] Another problem with current systems is that anonymous/unregistered users cannot select a presence indicator and open a communication interface to the user associated with the presence indicator. Moreover, such systems do not provide anonymous users with alternative communication interfaces based upon whether the user associated with the presence indicator is online. The prior art does not provide anonymous users with a way to determine if a user is online, open an instantaneous communication interface when a particular user is online, and a delayed communication interface when that same user is offline.

[0006] The prior art also lacks a system that provides seamless interoperability between differing client programs. For example, AOL Instant Messaging (IM) users may only send messages to other AOL IM users. Thus, current network based systems, lack the ability to provide users with a way to establish a communication channel with users who are presently connected to the network, but are utilizing different protocols for sending instantaneous message data to one another.

A. General Background Material About Computer Networks

[0007] In order to facilitate an understanding of how computer networks allows for the transfer of data a brief discussion about such networks is provided. Computers and computer networks are used to exchange information in many fields such as media, commerce, and telecommunications, for example. The exchange of information between computers typically occurs between a "server application" that provides information or services, and a "client application" or device that receives the provided information and services. Multiple server applications are sometimes available on a "system server" such as a single computer server that provides services for multiple clients. Alternatively, distributed server systems allow a single client to obtain services from applications residing on multiple servers. For example, in current distributed server systems, client applications are able to communicate with server applications executing on the same computer system or on another computer system accessible via a network, for instance via the Internet.

[0008] The Internet is a worldwide network of interconnected computers. An Internet client computer accesses a computer on the network via an Internet provider. An Internet provider is an organization that provides a client (computer) with access to the Internet (via analog telephone line or Integrated Services Digital Network line, for example). A client can, for example, read information from, download a file from, or send an electronic mail message to another computer/client using the Internet.

[0009] To retrieve a file or service on the Internet, a client must typically search for the file or service, make a connection to the computer on which the file or service is stored, and download the file or access the service. Each of these steps may involve a separate application and access to multiple, dissimilar computer systems (e.g. Computer systems having operating different systems). The World Wide Web (WWW) was developed to provide a simpler, more uniform means for accessing information on the Internet.

[0010] The components of the WWW include browser software, network links, servers, and WWW protocols. The browser software, or browser, is a tool for displaying a user-friendly interface (i.e., front-end) that simplifies user access to content (information and services) on the WWW. Browsers use standard WWW protocols to access content on remote computers running WWW server processes. A browser allows a user to communicate a request to a WWW server without having to use the more obscure addressing scheme of the underlying Internet. A browser typically provides a graphical user interface (GUI) for displaying information and receiving input. Examples of browsers currently available include Netscape Navigator and

Communicator, and Microsoft Internet Explorer.

[0011] WWW browsers and servers communicate over network links using standardized messages formats called protocols. The most common modern protocol is the TCP/IP (Transmission Control Protocol/Internet Protocol) protocol suite. The protocols are based on the OSI (Open Systems Interconnect) seven-layered network communication model for information transport. WWW messages are primarily encoded using Hypertext Transport Protocol (HTTP). HTTP instantiates the (top) Application layer of the OSI model. Application layer protocols facilitate remote access and resource sharing and are supported by the reliable communications ensured by the lower layers of the communications model. Therefore, HTTP simplifies remote access and resource sharing between clients and servers while providing reliable messaging on the WWW.

[0012] Information servers maintain the information on the WWW and are capable of processing client requests. HTTP has communication methods that allow clients to request data from a server and send information to the server. To submit a request, the client browser contacts the HTTP server and transmits the request to the HTTP server. The request contains the communication method requested for the transaction (e.g., GET an object from the server or POST data to an object on the server). The HTTP server responds to the client by sending a status of the request and the requested information. The connection may then be terminated between the client and the HTTP server.

[0013] A client request, therefore, consists of establishing a connection between the client and the HTTP server, performing the request, and terminating the connection. The HTTP server typically does not retain any information about the request after the connection has been terminated. That is, a client can make several requests of an HTTP server, but each individual request is treated independent of any other request.

[0014] The WWW employs an addressing scheme is that uniquely identifies Internet resources (e.g., HTTP server, file, or program) to clients and servers. This addressing scheme is called the Uniform Resource Locator (URL). A URL represents the Internet address of a resource on the WWW. The URL contains information about the protocol, Internet domain name and addressing port of the site on which the server is running. It also identifies the location of the resource in the file structure of the server. HTTP provides a mechanism of associating a URL address with active text. A browser generally displays active text as underlined and color-coded. When activated (by a mouse click, for example) the active text causes the browser to send a client request for a resource to the server indicated in the text's associated URL address. This mechanism is called a hyperlink. Hyperlinks provides the ability to create links within a document to move directly to other information. A hyperlink can request information stored on the current server or information from a remote server.

[0015] If the client requests a file, the HTTP server locates the file and sends it to the client. An HTTP server also has the ability to delegate work to gateway programs. The Common Gateway Interface (CGI) specification defines a mechanism by which HTTP servers communicate with gateway programs. A gateway program is referenced using a URL. The HTTP server activates the program specified in the URL and uses CGI mechanisms to pass program data sent by the client to the gateway program. Data is passed from the server to the gateway program via command-line arguments, standard input, or environment variables. The gateway program processes the data and returns its response to the server using CGI (via standard output, for example). The server forwards the data to the client using the HTTP.

[0016] When a browser displays information to a user it is typically as pages or documents (referred to as "web pages"). The document encoding language used to define the format for display of a Web page is called Hypertext Markup Language (HTML). A sever sends a Web page to a client in HTML format. The browser program interprets the HTML and displays the Web page in a format based on the control tag information in the HTML.
